Stop chasing ESG data.

Forms, files and surveys in one place, with every figure checked before approval.

THE PROBLEM

The chase starts every reporting cycle.

Your ESG data sits with many people across sites, suppliers and systems. Teams chase it by email, retype it from spreadsheets and find the errors at approval, when the deadline is closest. Gather gives every figure one structured route in.

HOW DATA COMES IN

Three routes in and one place to review.

Entry forms

A structured form for every disclosure, with one data block per country or entity.

Smart Import New

Upload the files you already hold. Squarely pre-fills the matching disclosures.

External surveys

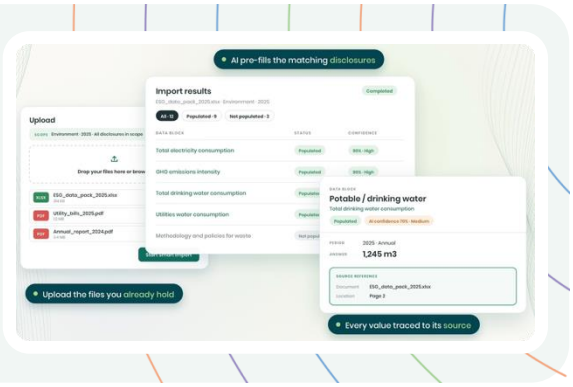

Suppliers answer by link, with no Squarely login. Reminders follow up.

Evidence travels with the data. Supporting files stay attached to each figure at the source, ready for your reviewer and auditor.

NEW IN GATHER · SMART IMPORT

Squarely now pre-fills your disclosures.

From the data you already have to disclosures ready for review.

HOW GATHER WORKS

From request to approved data.

Request	Collect	Validate	Approve
Assign owners. Send surveys and reminders.	Forms, Smart Import and uploads feed each disclosure.	The AI Validator flags units, gaps and format.	Your chosen manager approves. The data locks.

All along

A full audit trail records every submission and change.

CHECKED BEFORE APPROVAL

Catch errors before your approver does.

AI Validator
Checks units, missing values and format before you submit.

AI assistant on call
Ask what a disclosure means or which unit to use.

Choose your reviewer
Send each submission to the right assigned manager.

Source on every import
Smart Import shows the document and page behind each value.

BUILT FOR GROUPS

One structure for every entity, site and year.

- One data block per country or entity
- Up to five reporting years side by side
- Access limited to assigned subtopics
